

Broughton St. Mary's Church Edinburgh

Sector: Heritage Building

Radiator type: Multisec

No. of radiators: 25

Broughton St Mary's Church in the heart of Edinburgh underwent an incredible refurbishment in April 2022, which saw the old steel panel radiators and pipe coils replaced by 25 Multisec radiators in Anthracite Grey supplied by MHS. Beautifully installed by Lothian Heating Services Ltd, the new radiators were chosen for their stunning looks and impressive heat outputs.

Comment

“For such a prestigious building, we had to use a top-quality radiator, with the right aesthetics to compliment the stature of this historic church. We have worked closely with David Cranston (MHS Scotland ASM) for many years, and when it comes to a wide portfolio, MHS Radiators has the best there is. The selection and use of their multi-column Multisec radiators was obvious – and our client is as delighted with the renovations as are we.”

Kevin Liston, Contracts Manager, Lothian Heating Services

Multisec

An asset anywhere, Multisec is a stylish contemporary radiator based on a traditional theme. Lighter than cast iron, Multisec spans the gap between contemporary and classic, making it equally at home in either application. From one basic cylindrical column concept, this smart range of elegant and efficient radiators allows an architect or designer to provide highly versatile heating, without ever compromising on style.
