

BIM Drawings

User Guide

The component(s) you have downloaded from www.bimstore.co have been created by our in-house team of specialists. This download contains a manufacturer specific BIM component and render materials (if required).

This user guide has been included to provide guidance on how to correctly use and make the most of the component.

If the download contains manufacturer specific render materials. Revit will try and find the material images automatically on your computer in the following directory;

C:\LocalRVT\ Bimstore\ Materials\ MHS Radiators

Loading the component(s) into your project

You can load the chosen component into your project using the following method;

1. Open the Revit file containing your 'project' (rvt) and navigate to an appropriate view.
2. Go to the insert tab on the Revit ribbon and select 'Load Family'.
3. Navigate to the location of the saved component that you have downloaded, select the desired component and

click 'Open'. (Please note: it is vital that if there was a txt file included in the original download that this file is in the same location as the rfa file and they both are named the same.)

4. The component is now embedded into your project and ready to be placed. They can be selected from the Architecture Tab / Components / *select from dropdown* within your BIM project.

Placing the component(s)

The component(s) can be selected by selecting Component in the Architecture tab and selecting the family from the Type Selector drop down in the Properties Box or by selecting Components in the specific Systems tab) and dragged into your model and placed.

Manufacturer specific data

The component(s) contain technical and manufacturer specific data to assist the user when creating their project and/or when scheduling the component(s). To access the data embedded into the component(s), including COBie data, select the component and click the Edit Type button at the head of the Properties Box.

Using the component(s)

MHS Radiators component(s) offer a range of options which have been built into the component. To access these and apply please use the following method:

1. Go to a suitable view and select the component.
2. Once the family is selected, the Properties Box will appear on the screen.
3. Under the heading Construction will be tick boxes, dropdowns or any other functionality that can be adjusted.
4. Under the heading Other are the instance parameters to be filled in for facilities management purposes.
