1022	21			48	1500
1160	24			55	2000

How to place electric radiators

The national rules on installing electrical equipment in the bathroom must be respected. The electric radiators must be always installed outside zone 1 and 2. In particular the electric switch and control elements must be mandatorily located in zone 3, in order that no electrical control center is accessible to anyone using the shower or bath.
