

Penicuik Estate Scotland

Sector: Heritage Building

Radiator type: Multisec, Galant Plan **No. of radiators:** 91

Mechanical Contractor: Lothian Heating Services

Penicuik Estate, a 7,500-acre historic estate ten miles south of Edinburgh, has undergone an extensive restoration programme that is as ambitious in its scope as it is meticulous in its execution. The estate has been in the hands of the same family – the Clerks of Penicuik – since 1654, and its designed landscape, shaped over centuries by successive generations with a rare combination of architectural vision and cultural ambition, is today recognised as a work of outstanding artistic and historic significance.

At its heart stands the former Palladian stable block, a handsome courtyard building complete with clocktower and domed dovecote, which has been transformed into a 16-bedroom exclusive-use hotel. A series of cottages and lodges across the wider estate have been restored and made available for guest accommodation, with further properties to follow as the restoration programme continues.

With interiors designed to reflect the estate's exceptional heritage while meeting the expectations of a discerning luxury hospitality market, the project demanded heating products that could perform reliably across a wide variety of spaces. MHS Radiators supplied a combination of Multisec Raw, Multisec White, bespoke colour-matched Multisec, and colour-matched Galant Plan panel radiators, each specified to suit the individual character of the spaces throughout this landmark Scottish estate.

Multisec

An asset anywhere, Multisec is a stylish contemporary radiator based on a traditional theme. Lighter than cast iron, Multisec spans the gap between contemporary and classic, making it equally at home in either application. From one basic cylindrical column concept, this smart range of elegant and efficient radiators allows an architect or designer to provide highly versatile heating, without ever compromising on style.

Galant Plan

The Galant Plan is a high-output steel panel radiator combining reliable performance with a clean, unobtrusive profile. Available in a wide range of sizes and configurations, it delivers efficient, consistent heat output – making it a practical and versatile choice for both period and contemporary interiors where understated quality is the priority.

Colour Matching

For a project of Penicuik Estate's ambition and attention to detail, a standard finish was never going to be sufficient in every space. MHS Radiators' bespoke colour matching service allowed individual radiators to be finished in colours precisely chosen to complement the interiors – whether sitting quietly against period stonework or making a considered statement within a carefully designed room. With the ability to match virtually any RAL colour, MHS can ensure consistency of finish across an entire project, however varied its demands.
